

GILANG RAMADAN

SENIOR BACKEND DEVELOPER

Bandung, Indonesia | +6287823290601 | mgrware@gmail.com | gramadan.dev | linkedin.com/in/mgrdev

PROFILE

Senior Backend Developer with over 10 years of experience building monolithic and microservices systems such as marketplace, fintech, SaaS products using Ruby on Rails, Go, NestJS, Laravel, PostgreSQL, MYSQL and MongoDB, Experienced in integration payment API like Stripe API, Stripe Connect, Xendit, Midtrans with end to end ownership technical design to production.

Currently I'm building Bati, a multi-tenant POS SaaS platform for Indonesian business as a senior backend developer focused on building robust backend, architecting NestJS backend on PostgreSQL with Redis and BullMQ for background job processing and caching. Containerized with docker behind Traefik.

PROFESSIONAL EXPERIENCE

Solo Founder & Engineer, PT Giradia Solusi Digital, Bandung

Mar 2026 — Present

- Built Bati, a multi-tenant POS SaaS on NestJS, PostgreSQL serving a Flutter cashier app and admin dashboard
- Designed offline-first sync using client generated UUIDv7 keys with idempotent push and cursor-based pull, allowing merchants to sell offline and reconcile without duplicate sales or lost stock.
- Modeled every cash and stock as an immutable event with a derived read model, so corrections are counter-entries rather than edits. Profit and loss, cash flow, balance sheets, shift cash reconciliations and ledgers are all projected from a single source of truth, preventing retroactive movement.
- Built freemium/Pro access entitlement layer, features are resolved as package features, cached in Redis. Enforced server side by feature and quota guards and gating, allowing each report to be sold per flag as an add-on.
- Shipped F&B sales pipeline with per channel and open billing, without changing the core checkout flow, enabling multiple POS terminals to serve a single table concurrently without data loss from race conditions.
- Ran Production on Docker/Traefik: made BullMQ scheduled jobs (analytics, subscription lifecycle, notifications) idempotent via deduplication locks.

- Removed horizontal scaling barriers via a one time migration service, Redis-backed rate limiting, S3 compatible storage.

Senior Backend Developer, VIRTUAL SPIRIT, Selangor (Remote)

Mar 2022 — Feb 2026

- Designed the core domain layer using the Interactor and Organizer patterns, separating business logic from Rails models and controllers, building a maintainable foundation that reduced PR review time.
- Engineered an end to end marketplace payment infrastructure on Stripe API and Stripe Connect, implementing destination fees, split payments.
- Built an automated payment routing pipeline that distributes rent payments from tenants to owners with platform fee capture, eliminating manual reconciliation and delivering same day payment SLAs.
- Designed an escrow and subscription billing engine that supports recurring fee payments, hold and release flows, professional services bookings across multiple pricing tiers.
- Implemented a real time messaging layer with AnyCable in Ruby on Rails for in app chat and in app social media feature, tested to maintain 1000+ concurrent Websocket connections.
- Eliminated N+1 query patterns and refactoring heavy database loads, adding counter caching combined with Redis caching targeted to lower latency PostgreSQL .
- Containerized the entire application stack with Docker and Docker Compose, achieving dev/staging/production parity and reducing new engineer onboarding from 2 days to less than 4 hours.
- Partnered with distributed cross functional teams (FE, UI/UX, Product) across time zones and Agile/Scrum.

PT WEYLAND INDONESIA PERKASA, Jakarta

Engineering Manager

Nov 2019 — Feb 2022

- Promoted from Senior Backend developer to Engineering Manager after 2 years, given full ownership of the technology direction, architectural decisions, and responsible to manage 8 person engineering while continuing to do hands-on backend development.
- led the backend for AtozGo- a new on demand food delivery super app, built as a new product line and achieving over 154,000 monthly transactions with a 92% delivery success rate and IDR 3.76 billion GMV within months of launch.
- Designed a multi sided order routing and delivery engine across 9 service domains with real time push notifications via Anycable.
- Led a monolith app migration to microservices, separating billing and transaction flows into independently deployable services

Senior Backend Developer

Nov 2017 — Nov 2019

- Fully Responsible for the backend architecture of a fintech super app spanning 7 core service domains and 21+ sub services, bill payments (PPOB), topup, QRIS, e money, flight and bus ticketing, transfers and bank disbursement, achieving a monthly transaction volume over IDR 8.6 Billion and over 181.000 transactions/month within two years of launch.
- Maintained 1000 TPS with 99.9% uptime during peak utility payment cycles through load balancing on Nginx, horizontal scaling of stateless services and proactive migration of bottlenecks before incidents.

Backend Developer, WALDEN GLOBAL SERVICES, Bandung

Oct 2015 — Dec 2017

- Developed and maintained the Nutrifood Shipping Export & Import system using Ruby on Rails and SQL Server.
- Improved data management efficiency by implementing database best practices and optimizing complex SQL queries.
- Served as a technical lead for specific sprints, managing SOW estimations, milestones, and developer assignments.
- Authored core application skeletons and shared libraries to be utilized by the wider development team to ensure consistency.

Backend Developer, POLITEKNIK PIKSI GANESHA, Bandung

Jan 2014 — Aug 2015

- Built a comprehensive Certification Management System using Laravel and MySQL.
- Translated complex business requirements into functional product features while maintaining platform stability.

EDUCATION

D3	Jan 2015
Polytechnics Piksi Ganesha, Bandung	

TECHNICAL SKILLS

Languages: Ruby, Go, PHP, Node.js, JavaScript

Frameworks: Ruby on Rails, Gin, Laravel, NestJS, Next.js, Nuxt.js, ReactJS

Databases: PostgreSQL, MySQL, Redis, SQL Server, Supabase

Infrastructure: AWS (EC2, RDS, ALB, S3), Docker, Kubernetes, GitHub Actions, GitLab CI

Payments: Stripe Connect, Webhooks, Idempotency

Observability: New Relic, Sentry

Specialties: Interactor Pattern, Modular Monolith, Microservices, AnyCable, Sidekiq, Kafka, GraphQL, Debezium

Spoken Languages: Indonesian (Native), English (Professional Working Proficiency)
