SUMMARY

Senior Backend Developer specializing in payment systems, transaction, and SaaS systems with an ownership mindset, pragmatic architecture, and clear cross-functional collaboration. Over 10 years across marketplace, fintech, and POS products, I have translated domain requirements into production services using Ruby on Rails, Go, NestJS, Laravel, PostgreSQL, MySQL, and MongoDB while currently building Bati. That work includes Stripe API, Stripe Connect, Xendit, and Midtrans integrations, plus systems handling 1,000 TPS, 99.9% uptime, and more than 181,000 monthly transactions across distributed teams. Together, these experiences equip me to strengthen backend reliability, payment flows, and scalable product delivery as a Senior Backend Developer.

EXPERIENCE

Senior Backend Developer
March 2026 - Present

PT Giradia Solusi Digital · Bandung, Indonesia

- Built Bati as a multi-tenant POS SaaS with NestJS and PostgreSQL, serving Flutter cashier and admin applications for unified retail operations.
- Designed offline-first synchronization with client-generated UUIDv7 keys, idempotent pushes, and cursor-based pulls, preventing duplicate sales and lost stock during disconnected operations.
- Modeled cash and stock as immutable events with derived read models, enabling profit-and-loss, cash-flow, balance-sheet, shift-reconciliation, and ledger views from one source of truth.
- Implemented freemium and Pro entitlements with Redis-cached package features and server-side guards, controlling feature access and usage quotas across tenants.
- Shipped an F&B sales pipeline with per-channel and open billing, allowing concurrent terminals to serve tables without race-condition data loss.
- Hardened production operations with Docker, Traefik, idempotent BullMQ locks, Redis rate limiting, S3-compatible storage, and a one-time migration service, removing horizontal-scaling barriers.

Senior Backend Developer
March 2022 - February 2026

VIRTUAL SPIRIT · Selangor, Malaysia (Remote)

- Designed the core domain layer with Interactor and Organizer patterns, isolating business logic from Rails models and controllers for more maintainable marketplace workflows.
- Engineered Stripe API and Stripe Connect payment infrastructure, enabling destination fees and split payments within marketplace transaction flows.
- Built automated rent-payment routing, distributing tenant payments to owners with platform-fee capture and same-day payment SLAs.
- Designed escrow and subscription billing engines, supporting recurring payments, hold-and-release flows, and professional-services bookings across multiple pricing tiers.
- Implemented AnyCable real-time messaging in Ruby on Rails, supporting in-app chat and social features tested at 1,000+ concurrent WebSocket connections.
- Eliminated N+1 queries with counter caching and Redis, then containerized the stack with Docker Compose, reducing developer onboarding from two days to under four hours.

Engineering Manager

November 2019 - February 2022

PT Weyland Indonesia Perkasa · Jakarta, Indonesia

- Advanced from Senior Backend Developer to lead technology direction and architectural decisions, enabling hands-on delivery across an eight-person engineering team.
- Led backend development for AtozGo, reaching more than 154,000 monthly transactions, a 92% delivery success rate, and IDR 3.76 billion GMV within months of launch.
- Designed multi-sided order routing and delivery across nine service domains, coordinating real-time push notifications through AnyCable for on-demand operations.
- Led migration from a monolith to microservices, separating billing and transaction flows into independently deployable services for clearer release boundaries.

Senior Backend Developer

November 2017 - November 2019

PT Weyland Indonesia Perkasa · Jakarta, Indonesia

- Owned backend architecture for a fintech super app spanning seven core domains and 21+ subservices, structuring bill payments, top-ups, QRIS, e-money, ticketing, transfers, and bank disbursement.
- Scaled the platform beyond IDR 8.6 billion in monthly transaction volume and more than 181,000 monthly transactions within two years of launch across its financial service domains.
- Maintained 1,000 TPS with 99.9% uptime during peak utility-payment cycles by using Nginx load balancing, stateless horizontal scaling, and proactive bottleneck migration.

Backend Developer

October 2015 - December 2017

Walden Global Services · Bandung, Indonesia

- Developed and maintained Nutrifood's Shipping Export & Import system with Ruby on Rails and SQL Server, supporting core logistics workflows.
- Optimized complex SQL queries and applied database best practices, improving data-management efficiency within the operational system.
- Led selected sprints through SOW estimation, milestone planning, and developer assignment, creating clearer delivery coordination for the project team.
- Authored application skeletons and shared libraries, standardizing reusable implementation patterns for the wider development team.

Backend Developer

January 2014 - August 2015

Politeknik Piksi Ganesha · Bandung, Indonesia

- Built a Certification Management System with Laravel and MySQL, centralizing certification workflows for the institution.
- Translated complex business requirements into functional product features, aligning backend delivery with user needs and platform constraints.
- Maintained application stability during feature delivery through structured backend implementation, preserving reliable certification-management workflows.

EDUCATION

Polytechnics Piksi Ganesha

January 2015

D3 · Informatics Management

SKILLS

- Technical Skills: Ruby, Go, PHP, Node.js, JavaScript, Ruby on Rails, Gin, Laravel, NestJS, Next.js, Nuxt.js, ReactJS, PostgreSQL, MySQL, MongoDB, Redis, SQL Server, Supabase, Stripe API, Stripe Connect, Xendit, Midtrans, Webhooks, Idempotency, UUIDv7, Interactor Pattern, Organizer Pattern, Modular Monolith, Microservices, AnyCable, Nginx, BullMQ, S3-compatible storage
- Tools: AWS (EC2, RDS, ALB, S3), Docker, Kubernetes, GitHub Actions, GitLab CI, New Relic, Sentry, Sidekiq, Kafka, GraphQL, Debezium
- Soft Skills: Technical leadership, Cross-functional collaboration, Agile/Scrum delivery, Architecture ownership, Team coordination
- Languages: Indonesian (Native), English (Professional Working Proficiency)
